Vision Dummy RTD probe - Test Jig

For those of you that perform field service on Batchen/Email Vision LPG Browsers the following may be of interest.

We have manufactured a device to assist in the servicing of this equipment. It is a Dummy RTD probe that can be inserted in the RTD input socket (J4) on a Vision Processor Board. It is a precision RTD Resistor calibrated to 15 degrees C & it may be useful for fault analysis while on site to determine if a fault is on the Vision Processor board or in the RTD Temp Probe circuit.

NOTE: This device is for fault diagnosis only & should never be left installed in a browser on site.

Quote to supply the test jig follows. Also see attached picture.

1 x RTD Precision Resistor 15 deg C with a connector to suit plug & play on a Vision LPG Processor @ \$75.00 ea + GST.

Regards,
Kenton McKay.
